

Integrating VuFind with external APIs

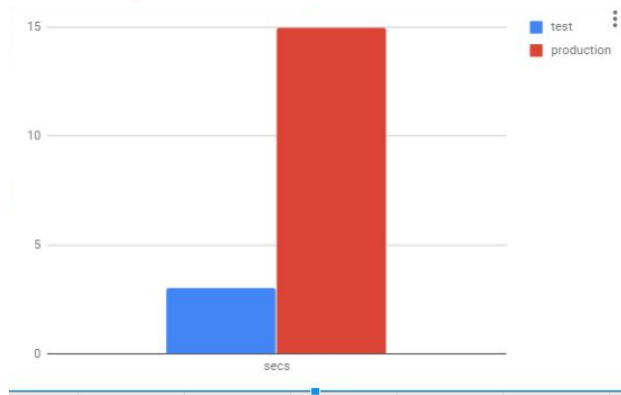

sharing our bumps in the road & how we worked around them

When working on any integration:

Test your edge cases early

Never assume the production API endpoint will be as fast as the test API endpoint

Plan that calls to your vendors API “WILL” fail in worse ways than you thought possible.

VuFind integration with ArchivesSpace

The screenshot displays the 'ASA - Library Catalog' interface for Lehigh University. The page is titled 'ASA - Library Catalog' and features a search bar with a 'Find' button. Below the search bar, there are navigation tabs for 'Catalog', 'Articles', and 'Catalog AlphaBrowse'. The current page is for 'Willis Appleford Slater Papers / Holdings'. A red arrow points to the 'Finding Aid' tab, which is selected. The 'Finding Aid' tab shows the title 'Willis Appleford Slater Papers, 1910-1937', the size 'linear_feet', and the call number 'SC MS 0100'. The abstract text is visible below the call number.

Willis Appleford Slater Papers

Willis A. Slater Papers contain reports, blueprints, diaries, correspondence, photographs, and notebooks from Slater's professional career as a civil engineer. These papers, ranging from 1910 to 1937, illustrate his career from graduate student to professor to the National Bureau of Standards and finally to Lehigh University. Much of this collection is made up of testing reports from Slater himself or from companies that he consulted for, and many of these reports were on his specialty, reinforced concrete. The most notable items in this collection are Slater's diary and papers on the Stevenson Creek Dam and the investigation papers from the Knickerbocker Theater disaster. This collection can be used for studying the beginning of the use of reinforced concrete and the building of the Stevenson Creek Dam. The photographs in this collection may also be useful for studying construction, work sites, and labor in the early twentieth century.

Invalid IP -- just on the VuFind prod srvr.

The screenshot shows a web browser's developer console with a red header bar. The console is open to the 'BODY' tab, displaying an XML error message. The message is an <APIErrorMessage> with a detailed description of 'Invalid IP' and an error number of 139. The XML is formatted in a 'pretty' view. A scrollbar is visible at the bottom of the console, and the text 'length: 275 bytes' is shown in the bottom right corner.
